Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

patentdocket@oblon.com oblonpat@oblon.com jgardner@oblon.com

Office Action Summary Taximiner	 					
The MAILING DATE of this communication appears on the cover sheet with the correspondence addres of Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filled on 2a) This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the nor closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 1-24 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration. 5) Claim(s) is/are allowed.	SCHMITT ET AL.

Supplemental Office Action

1. Upon reconsideration, the indicated allowability of claim 13 in the action mailed 9/11/2007 is withdrawn in light of the combination of prior art references of Smith, Maruyama and Momoda which renders claim 13 prima facie unpatentable for the reasons set forth in paragraph 2 below. The delay in setting forth this rejection is regretted.

It is noted that the time period for response is being restarted.

Claim Rejections - 35 USC § 103

2. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Smith et al (US 6, 342, 571 B1) in view of Maruyama et al (US 5, 270, 439) and Momoda et al (US 6, 698, 883 B2).

The discussion with respect to Smith et al in view of Maruyama et al in paragraph 12, of office action mailed 9/11/2007, is incorporated here by reference.

Smith et al in view of Maruyama et al is silent with respect to allyl polyethylene glycol methacrylate.

However, Momoda et al teach that when a combination of particular allyl ether or allythio ether compound and other radically polymerizable monomer, is mixed with a photochromic compound, the obtained curable composition exhibits.

10/587,257 Art Unit: 1796

excellent photochromic properties as well as excellent base material properties such as high hardness and high heat resistance (column 2, lines 22-37). The present invention is concerned with a curable composition comprising (column 2, lines 38-55).

(A) an allyl ether or allylthio ether compound represented by the following general formula (1),

wherein R¹ and R² are, independently from each other, hydrogen atoms or alkyl groups, R³ is an alkyl group, an acyl group, an acryloyl group, a methacryloyl group, a vinyl group or a styryl group, Z is an oxygen atom or a sulfur atom, and a and b are, independently from each other, from 0 to 20 in average, a+b being from 3 to 20;

Many of the existing curable compositions that have been known for their relatively excellent photochromic properties exhibit low hardness and low heat resistance even after curing. However, curable composition using the above mentioned particular monomer does not permit the hardness and heat resistance to decrease greatly after it has been cured. Concrete examples of the allyl ether compound that can be used include methacryloxypolyethylene glycol allyl ether, methacryloxypolyethylene glycol-polypropylene glycol allyl ether and

Application/Control Number:

10/587,257 Art Unit: 1796

acryloxypolyethylene glycol allyl ether (column 3, lines 59-60; column 4, lines 1-17). It is desired that the other radically polymerizable monomer is polymerized with a bifunctional or polyfunctional polymerizable monomer herein after referred to as a "high hard monomer" (column 4, lines 27-30). Examples of high hard monomers include those represented by the general formula 6 depicted below -

$$H_{2}C = C - CS - CS - CH CH S - CH_{2}$$

$$H_{2}C = C - CS - CS - CH_{2}$$

$$H_{2}C = C - CS - CH_{2}$$

wherein R⁷⁴ and R⁷⁵ may be same or different, and are hydrogen atoms or methyl groups and "i" is an integer of from 1 to 10 (column 9, lines 8-10). The cured products obtained from the above compound, represented by general formula 6, exhibits high refractive indexes of not less than 1.56 and high Abbe numbers, lending themselves well for obtaining photochromic lenses. Therefore, it would have been obvious to add allyl ether compounds such as methacryloxypolyethylene glycol allyl ether (reads on allyl polyethlyene glycol methacrylate of present claim) to the composition of Smith et al in view of Maruyama et al, for above mentioned advantages.

Application/Control Number:

10/587,257

Art Unit: 1796

3. In addition to the above, obviousness-type double patenting rejection of claims 1-

24 and 1, 7, 11-17 and 22-24 in paragraphs 3 and 4 respectively; objection to

claims 3-6 and 14-15 in paragraphs 5 and 6 respectively; rejection of claims 23 in

paragraph 8 and 9; rejection of claims 1-12 and 14-24 in paragraph 12, of office

action mailed 9/11/2007, is in effect.
